01 Platform Architecture & User Roles

Growth India CRM & Employee Management Platform serves as the central operating command center for three primary stakeholder roles. Each role has a dedicated workspace with strict access controls.

Role	Access Portal	Target Stakeholder	Primary Responsibilities
ADMINISTRATOR	/growthIndia	Executive Management, HR Head, Super Admin	Client creation, employee master governance, KYC verification, global task oversight, system settings.
CORPORATE CLIENT	/ (or /client)	Partner Companies, Employers, Operations Managers	Task creation, live comment tracking, employee roster monitoring, attendance review, work deliverable approvals.
EMPLOYEE	/ (or /employee/attendance)	Assigned Staff, Executives, Developers, Field Workers	Daily check-in/out, punch tracking, task deliverable submission, replying to client comments, leave requests.

Security & Clean Input Policy

Clean Privacy Standard (Zero Public Data Exposure)

All login and modal input boxes across the platform are strictly protected against public data exposure:

- **Email ID Placeholder:** Login boxes display a generic `Email ID` placeholder instead of hardcoded emails.
- **Autofill Protection:** Aggressive browser autofill injection is neutralized via dummy absorbers so clean inputs are always presented.
- **DPDP Masking:** Sensitive employee identity documents (Aadhaar & PAN) are masked across all view drawers.

Portal Access Points

- **Administrator Governance Center:** Navigate to `http://localhost:3000/growthIndia`
- **Client & Employee Workspace Portal:** Navigate to `http://localhost:3000/`
- **Default Administrator Credentials:** `admin@growthindia.co` / Password: `Admin@123`

How an Administrator onboards new corporate clients and provisions dedicated workforce accounts with automated sequential identifiers.

Admin Portal (/growthIndia) → Click "Add Client" → Auto ID Generated (CLI-XXX-00001) → Credentials Issued → Client Hires Employees (EMP-XXX-0001)

Use Case 2.1: Registering a New Client Organization

1. Log in to the Admin Portal at `http://localhost:3000/growthIndia` using your Administrator credentials.
2. Click the gold "Add Client" button on the top executive toolbar.
3. Fill in Organization Details:
 - **Company Name:** e.g., *Tata Motors Logistics*
 - **Contact Person Name & Mobile:** Primary coordinator phone number.
 - **Email ID:** Corporate billing / official email.
 - **Industry:** Select industry domain (Manufacturing, IT, Logistics, Retail).
4. Click "Save & Create Client". The system automatically issues a standardized Client ID (e.g., `CLI-TAT-00001`) and provides login credentials for the client.

Use Case 2.2: Adding Employees under a Client

1. In the Admin Portal or Client Portal, navigate to the "Employees" tab and click "Add Employee".
2. Select the target Client Company. The employee sequence will dynamically bind to that client (e.g., `EMP-TAT-0001`).
3. Enter Full Name, Mobile Number, Designation, and Job Location.
4. Upload KYC documents (Aadhaar & PAN) which are stored in the encrypted DPDP vault.
5. Set temporary password or click "Generate Credentials". The employee can now immediately log in via the Workspace Portal.

⚠ Sequential ID Integrity Rule

Client IDs always follow the `CLI-[3-Letter Prefix]-[5-Digit Sequence]` format (e.g., `CLI-SHR-00001`). Employee IDs follow `EMP-[3-Letter Prefix]-[4-Digit Sequence]`. Sequences never collide and maintain permanent corporate lineage.

The core collaboration engine connecting Corporate Clients and Employees. Enables task delegation, live deliverable submissions, and real-time chat.

Client Creates Task (TSK-XXXXXX) → Assigned to Staff (EMP-XXX-0001) → Staff Submits Deliverable Links → Live Comments & Chat Thread → Client Reviews & Completes

Use Case 3.1: Client Creates & Assigns a Task

1. Log in to the Client Portal at `http://localhost:3000/` with client credentials.
2. Navigate to the "Tasks & Deliverables" section and click "+ Create New Task".
3. Define Task Specifications:
 - **Task Title:** Specific deliverable objective (e.g., *Compile Regional Dispatch Logs for Sector 4*).
 - **Assignee:** Choose from company staff roster dropdown.
 - **Priority & Due Date:** Low, Medium, High, or Urgent.
 - **Required Delivery Format:** Excel/CSV, PDF, or Google Drive URL.
 - **Checklist Items:** Add step-by-step milestones for employee tracking.
4. Click "Assign Task". The system generates a formatted Task ID (e.g., `TSK-000001`) and instantly updates the employee's task board.

Use Case 3.2: Employee View & Deliverable Submission

1. Employee logs in at `http://localhost:3000/` and views the "My Tasks" console.
2. Click on the assigned task card. The 4-tab execution hub opens:
 - **Tab 1: Work & Deliverables:** Check off completed milestones, paste work URLs (Google Drive / GitHub / Sheet link), and click "Submit for Client Review".
 - **Tab 2: Comments & Chat:** View all instructions from the Client and post real-time updates.
 - **Tab 3: Review & Feedback:** View ratings and remarks submitted by the Client upon review.
 - **Tab 4: History:** View full audit trail of task status shifts.

Use Case 3.3: Real-Time Comments & Chat Synchronization

💬 Live Two-Way Communication

Both Clients and Employees can exchange messages directly inside the task modal. Comments automatically feature distinct role badges:

- **Client Messages:** Display `Client • [Company Name]` badge.
- **Employee Messages:** Display `Staff` badge with employee name.
- **Local Section Refresh:** Use the "Refresh Details" button to load new comments instantly without refreshing the webpage.

Comprehensive workforce presence tracking with shift grace-period telemetry, break management, and employee leave requests.

Use Case 4.1: Daily Quick-Punch Cycle (Employee)

The 4-Step Daily Presence Flow

1. **Check-In (Punch In):** Click "*Punch In*" upon shift arrival. Checks in and timestamps work session. Late check-ins beyond 09:45 AM are flagged with exact delayed minutes.
2. **Take Break:** When stepping out for tea or lunch, click "*Take Break*" and select break category. Work session timer pauses.
3. **Resume Work:** Click "*Resume Work*" upon return. Productive time tracking automatically resumes.
4. **Check-Out (Punch Out):** Click "*Check Out*" at shift completion. System calculates total productive duration vs break minutes.

Use Case 4.2: Client Attendance Hub & Roster Monitoring

Corporate Clients can inspect their deployed workforce attendance in real-time from the **Attendance Hub**:

- **Turnout Metrics:** Real-time counts of *Working Now*, *On Break*, *Punched Out*, and *Absent Today*.
- **Roster Table:** Exact check-in times, break durations, and punctuality status for every employee.
- **Section Refresh Button:** Dedicated "*Refresh Suite*" button in header refreshes live turnout without website reload.

Use Case 4.3: Employee Leave Application & HR Approval

1. Employee navigates to "**Leave Management**" and clicks "**Apply Leave**".
2. Select Leave Type (Casual Leave, Sick Leave, Emergency Leave).
3. Specify Start Date, End Date, and business reason.
4. Click "**Submit Request**".
5. Admin or HR Manager opens the "**Leave Approvals**" dashboard, inspects the request, and clicks "**Approve**" or "**Reject**" with reviewer remarks.

Managing sales leads, deal progression, multi-factor scoring, and immutable audit logging for compliance.

Use Case 5.1: Lead Ingestion with Real-Time Duplicate Prevention

When adding a sales prospect via **"Add Lead"**, the platform performs real-time duplicate checking against existing mobile numbers, emails, and company records:

- If matching records exist, an instant warning displays with links to the existing lead.
- Prevents cross-executive territory conflicts and ensures clean data hygiene.

Use Case 5.2: 8-Stage Pipeline Progression

Stage	Definition & Objective	Next Action
NEW	Inbound lead or prospect ingested into system.	Assign sales executive & initiate first contact.
CONTACTED	Introductory phone call or email completed.	Establish stakeholder requirements.
QUALIFIED	Budget, authority, and timelines verified.	Schedule discovery meeting & product demo.
FOLLOW_UP	Active discussion on scope and telemetry.	Prepare proposal / quote.
PROPOSAL	Formal commercial quotation submitted.	Conduct pricing review & negotiation.
NEGOTIATION	Contract terms and SLAs under legal review.	Finalize closing agreements.
WON	Deal successfully closed & contract signed.	Automatically convert to active Client organization.
LOST	Deal abandoned or lost to competitor.	Log loss reason for BI reporting.

Use Case 5.3: Immutable Append-Only Audit Logging

Regulatory Compliance & Audit Center

Every administrative action, stage transition, employee suspension, document preview, and task modification is permanently recorded in the **Audit Logs Center**:

- Captures Actor ID, Entity ID, IP Address, Timestamp, and Before/After JSON data diff.
- Immutable and append-only: audit logs cannot be edited or deleted by any user.

Summary: Quick Troubleshooting FAQ

Q: Why does the login box not show pre-filled credentials?

A: By design, for security and privacy compliance, all input boxes display clean placeholders. Enter your registered email ID and password manually.

Q: How do I refresh a specific section without reloading the whole site?

A: Use the local *"Refresh"* buttons available at the top-right of each section (Overview, Workforce, Attendance, Tasks).
